Good morning,

Respectfully, I would like to bring to everyone's attention the code for no flammable material does not leave subject to interpretation by AHU, the pressure 3,600 psig. Could blow the aluminum off the combustible material, before you take the BS, being fed to you by non-experts you want to do as the code requires for CNG this is not a joke!

Code was sent to you.

N.I.S.T. has a history of safety infractions, 1 death, 1 recordable injury in the last 7 months, we might want to stop thinking we are above safety.

Thank you,

---

Good Morning,

As we discussed in April, the agency would submit a supplemental report. Today, we received the agency's supplemental report concerning the allegations previously referred for investigation. By law you have the right to review and comment on the supplemental report if you wish. Comments typically take the form of a short business letter, examples of whistleblower comments filed in other matters can be found on OSC's website at: Public Files [osc.gov].

Attached is a PDF that contains a letter from me describing the comment process, a comment consent form, and the agency’s supplemental report. By statute whistleblowers have a 15-day turn-around for comments, but if you need more time let me know and we can arrange an extension. Commenting is voluntary—you are under no obligation to do
so, but if you do provide comments, please complete and return the consent form with your signed and dated comments. Feel free to call with any questions. Thank you for your continued assistance with this matter.

Best Regards,
